

## **Interventions on Climate Change Among Indigenous Farmer Communities in South-West Zimbabwe**

Mark Matsa

### **Abstract**

The chapter identifies and discusses the effort of government and non-governmental organisations in trying to help minority farmer communities in south-west Zimbabwe cope with climate-induced shocks and stressors. It tries to evaluate the effectiveness of the interventions and to evaluate how communities appreciate the assistance rendered to them. The problem with most of the interventions is that they are reactive rather than proactive.
